3-band parametric EQ V2.0

Full-Control Version with all pots

Overview

This implementation of the 3-band parametric EQ is the full control type. Frequency and Q adjustment are possible via pots. You can dial in the parameters while you work. This design uses a charge pump to double the power for more headroom and less distortion. It also contains a rectifier to eliminate the always present problem of polarity protection.

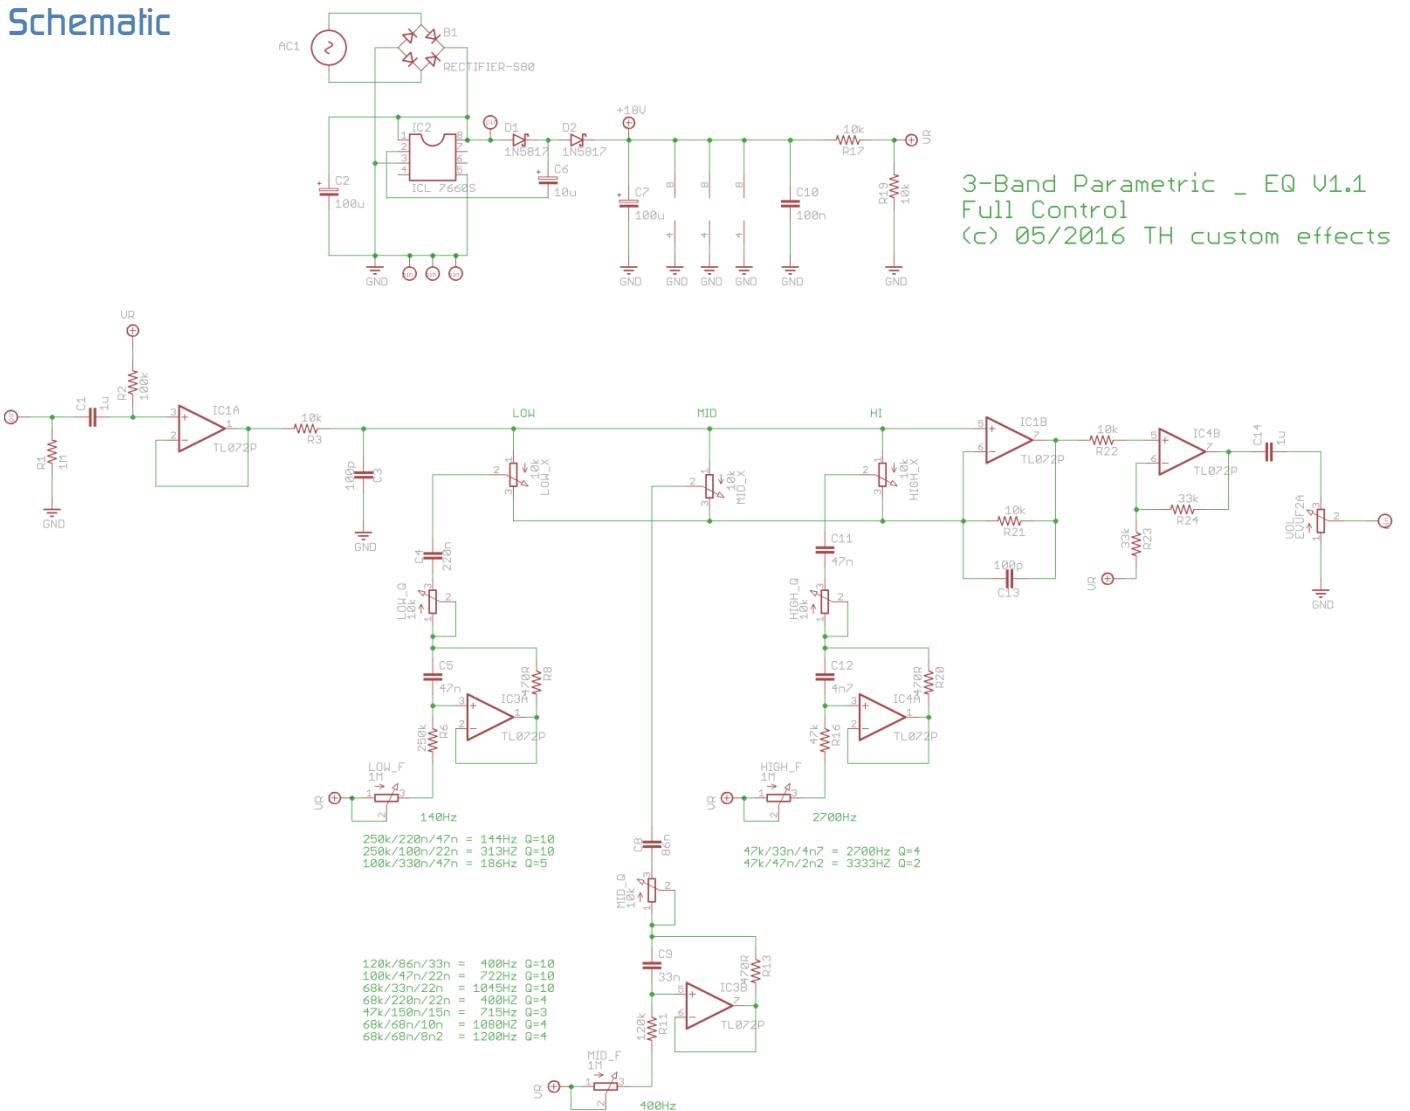

V2.0 features a new layout to provide more space between pots for easier use.

General

It uses OpAmps as gyrators. There are already several frequencies calculated and they show on the schematic.

Additionally you can use Jack Ormans online calculator to find the correct parts values if you need a special frequency or Q. Please visit <http://www.muzique.com/lab/gyrator.htm> to find out more about it.

Schematic

Bill of materials

	Parts	Qty	Value	Description	
Resistors	R1	1	1M		
	R2	1	100k		
	R3, R17, R19, R21, R22	5	10k		
	R6	1	100k*		
	R8, R13, R20	3	470R		
	R11, R16	2	47k*		
	R23, R24	2	33k	*R23=20k for gain	
	Capacitors	C1, C14	1	1uF	MLCC
C2, C7		2	100uF	polarized electro 5-8mm \varnothing / 8mm / 25V	
C3, C13		2	100p	ceram	
C4		1	330n*	box film	
C5		1	47n*	box film	
C6		1	10uF	polarized electro 5-8mm \varnothing / 8mm / 25V	
C8		1	150n*	box film	
C9		1	15n*	box film	
C10		1	100n	box film	
C11		1	33n*	box film	
C12		1	4n7*	box film	
Diodes		B1	1	CBRHSDH1-40L	Bridge rectifier
		D1, D2	2	1N5817	Schottky diode
Pots	Bass, Mid, High	3	10k lin	9mm Alpha	
	Volume	1	100k log	9mm Alpha	
	Q	3	5k/10k	9mm Alpha	
	Freq	3	1M	9mm Alpha	
ICs	IC1, IC3, IC4	3	TL072(IP)	Or better	
	IC2	1	ICL 7660S	Voltage doubler	

Variations

Here you find different values for different frequency spots. Please note that a Q of 10 defines small bandwidth (1/4 octave) and Q of 3 is about one Octave

Bass (R6 / C4 / C5)

250k/220n/47n = 144Hz Q=10
 250k/100n/22n = 313HZ Q=10
 100k/330n/47n = 186Hz Q=5

Highs (R16/ C11 / C12)

47k/33n/4n7 = 2700Hz Q=4
 47k/47n/2n2 = 3333HZ Q=2

Mids (R11 / C8 / C9)

120k/86n/33n = 400Hz Q=10
 100k/47n/22n = 722Hz Q=10
 68k/33n/22n = 1045Hz Q=10
 68k/220n/22n = 400HZ Q=4
 47k/150n/15n = 715Hz Q=3
 68k/68n/10n = 1080HZ Q=4
 68k/68n/8n2 = 1200Hz Q=4

Building

Start with populating the rectifier on the backside. Then diodes and all resistors. Put in sockets for the ICs next. Then MLCC and ceramic caps, then box film caps and electros at the last.

Pots are mounted from the backside.

Enclosure

This PCB does fit in a 1590BB enclosure.

Finally

The 3-band parametric EQ is a great tool for any purpose that needs manipulation of a specific frequency range in your signal. Be it a bass boost or taming high frequencies.
